Hormonal Determinants of Breast Cancer - An Epidemiological Perspective

Joanne Dorgan*, University of Maryland, Baltimore

Abstract
My research focuses on hormonal determinants of cancer, particularly breast cancer, and how the environment, behavior, and genetics could potentially influence risk through hormonal pathways. In this presentation I will describe results of our research on endogenous sex hormones and breast cancer risk, discuss our findings on hormonal effects of adiposity, diet, alcohol and stress, and finally summarize our future directions.

Keywords: Breast cancer, Hormones, Adiposity, Diet, Alcohol, Stress.
